BOARD QUESTION PAPER: MARCH 2020 Mathematics Part - I

Time: 2 Hours

Notes:

- i. *All* questions are compulsory.
- ii. Use of calculator is not allowed.
- iii. The numbers to the right of the questions indicate full marks.
- iv. In case of MCQ's Q. No. 1(A) only the first attempt will be evaluated and will be given credit.
- v. For every MCQ, the correct alternative (A), (B), (C) or (D) of answers with subquestion number is to be written as an answer.

Q.1. A. For every subquestion 4 alternative answers are given. Choose the correct answer and write the alphabet of it: [4]

i. In the format of GSTIN there are _____ alpha-numerals.

ii. From the following equations, which one is the quadratic equation?

(A)
$$\frac{5}{x} - 3 = x^2$$

(B) $x(x+5) = 4$
(C) $n-1 = 2n$
(D) $\frac{1}{x^2}(x+2) = x$

iii. For simultaneous equations in variables x and y, if $D_x = 49$, $D_y = -63$, D = 7, then what is the value of x?

(A)	7	(B)	-7
(C)	$\frac{1}{7}$	(D)	$\frac{-1}{7}$

iv. If
$$n(A) = 2$$
, $P(A) = \frac{1}{5}$, then $n(S) = ?$
(A) $\frac{2}{5}$
(B) $\frac{5}{2}$
(C) 10
(D) $\frac{1}{3}$

Q.1. B. Solve the following subquestions:

- i. Find second and third term of an A.P. whose first term is -2 and common difference is -2.
- ii. 'Pawan Medicals' supplies medicines. On some medicines the rate of GST is 12%, then what is the rate of CGST and SGST?
- iii. Find the values of *a* and *b* from the quadratic equation $2x^2 5x + 7 = 0$.
- iv. If 15x + 17y = 21 and 17x + 15y = 11, then find the value of x + y.

Q.2. A. Complete and write any *two* activities from the following:

i. Complete the following table to draw the graph of 2x - 6y = 3:

x	-5	
у		0
(x, y)		

[4]

[4]

Max. Marks: 40

First term and common difference of an A.P. are 6 and 3 respectively. Find S₂₇. Solution:

First term = a = 6, common difference = d = 3, $S_{27} = ?$

$$S_n = \frac{n}{2} [\boxed{ + (n-1)d}] - \text{formula}$$

$$S_{27} = \frac{27}{2} [12 + (27 - 1) \boxed{ }]$$

$$= \frac{27}{2} \times \boxed{ }$$

$$= 27 \times 45$$

$$∴ S_{27} = \boxed{ }$$

iii. A card is drawn from a well shuffled pack of 52 playing cards. Find the probability of the event, the card drawn is a red card.

Solution:

Suppose 'S' is sample space.

 \therefore n(S) = 52

Event A: Card drawn is a red card.

 $\therefore \quad \text{Total red cards} = \boxed{ hearts + 13 \text{ diamonds}}$ $\therefore \quad n(A) = \boxed{ }$ $\therefore \quad p(A) = \boxed{ n(S)} - \text{formula}$ $\therefore \quad p(A) = \frac{26}{52}$ $\therefore \quad p(A) = \boxed{ }$

Q.2. B. Solve any *four* subquestions from the following:

- i. Find the value of the determinant:
 - $\begin{bmatrix} \frac{7}{3} & \frac{5}{3} \\ \frac{3}{2} & \frac{1}{2} \end{bmatrix}$
- ii. Solve the quadratic equation by factorisation method:

$$x^2 - 15x + 54 = 0$$

- Decide whether the following sequence is an A.P. if so, find the 20th term of the progression:
 -12, -5, 2, 9, 16, 23, 30,
- iv. A two digit number is formed with digits 2, 3, 5, 7, 9 without repetition. What is the probability that the number formed is an odd number?
- v. If $L = 10, f_1 = 70, f_0 = 58, f_2 = 42, h = 2$, then find the mode by using formula.

[8]

Q.3. A. Complete and write any one activity from the following:

Age group (in years)	No. of Persons	Measure of central angle
20 - 25	80	$\boxed{\frac{200}{200}} \times 360 = \boxed{\frac{1}{200}}$
25 - 30	60	$\frac{60}{200} \times 360 = $
30 - 35	35	$\frac{35}{200} \times \boxed{} = 63^{\circ}$
35 - 40	25	$\frac{25}{200} \times 360 = $
Total	200	

i.

ii. Shri Shantilal has purchased 150 shares of FV ₹ 100, for MV of ₹ 120, Company has paid dividend at 7%, then to find the rate of return on his investment, complete the following activity:

Solution: FV = ₹ 100; Number of shares = 150

Market value = ₹ 120

1. Sum investment = $MV \times No.$ of Shares

- ∴ Sum investment = ₹ 18,000
- Dividend per share = $FV \times Rate$ of dividend 2.

=

 \therefore Total dividend received = 150×7

3. Rate of return =
$$\frac{\text{Dividend income}}{\text{Sum invested}} \times 100$$

Q.3. B. Attempt any two subquestions from the following:

- A balloon vendor has 2 red, 3 blue and 4 green balloons. He wants to choose one of them at i. random to give it to Pranali. What is the probability of the event that Pranali gets:
 - 1. a red balloon.
 - 2. a blue balloon.
- ii. The denominator of a fraction is 4 more than twice its numerator. Denominator becomes 12 times the numerator, if both the numerator and the denominator are reduced by 6, find the fraction.

[6]

iii. A milk centre sold milk to 50 customers. The table below gives the number of customers and the milk they purchased. Find the mean of the milk sold by direct method:

Milk Sold (litre)	No. of Customers
1–2	17
2–3	13
3–4	10
4-5	7
5-6	3

iv. In an A.P. sum of three consecutive terms is 27 and their products is 504. Find the terms. (Assume that three consecutive terms in an A.P. are a - d, a, a + d.)

Q.4. Attempt any *two* subquestions from the following:

i. Represent the following data by histogram:

Price of Sugar (per kg in ₹)	Number of Weeks
18–20	4
20-22	8
22–24	22
24–26	12
26–28	6
28-30	8

- ii. One person borrows ₹ 4,000 and agrees to repay with a total interest of ₹ 500 in 10 instalments. Each instalment being less than the preceding instalment by ₹ 10. What should be the first and the last instalments?
- iii. The sum of the areas of two squares is 400 sq.m. If the difference between their perimeters is 16 m, find the sides of two squares.

Q.5. Attempt any *one* subquestion from the following:

i. Convert the following equations into simultaneous equations and solve:

$$\sqrt{\frac{x}{y}} = 4, \frac{1}{x} + \frac{1}{y} = \frac{1}{xy}$$

ii. A dealer sells a toy for ₹ 24 and gains as much percent as the cost price of the toy. Find the cost price of the toy.
